

# **PROBIOGAS**

**Economic effects, barriers and incentives of biogas  
from centralised co-digestion**

By Kurt Hjort-Gregersen

**Institute of Food and Resource Economics,  
University of Copenhagen**

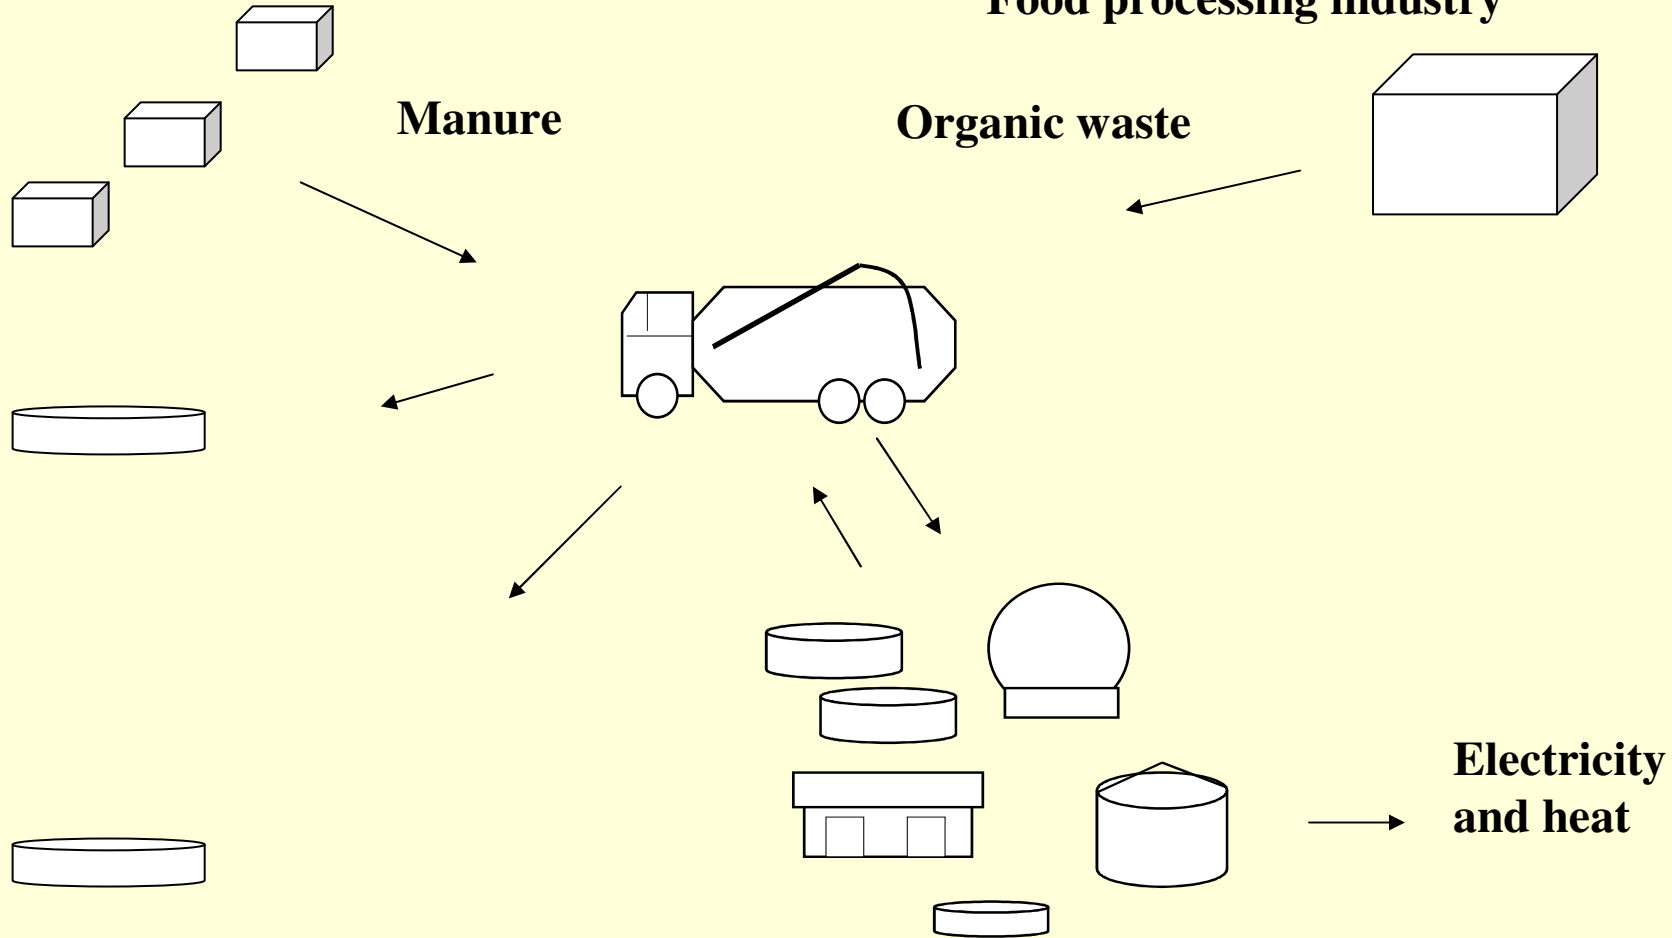

# Centralised Co-digestion Plant Concept

**Farms**

**Food processing industry**

**Manure**

**Organic waste**

## **What did we do in the PROBIOGAS project ?**

**Clarify the potential of a hypothetical CAD-plant in 6 EU countries based on local preconditions**

**With respect to:**

- Plant size, biomass resources, methane, heat and electricity production**
- Effects on GHG emissions and Nitrogen leaches**
- Effects on nutrient utilisation and fertiliser value**
- Effects on farmers economy**
- Economic performance of the CAD system**
- Socio-economic evaluation of the whole system**

**However**

**The assessments may not be regarded as adequate feasibility studies ready for decision. More detailed analysis and planning must be carried out for the specific situation before final decisions are made.**

## **Difference analysis**

**A comparison between:**

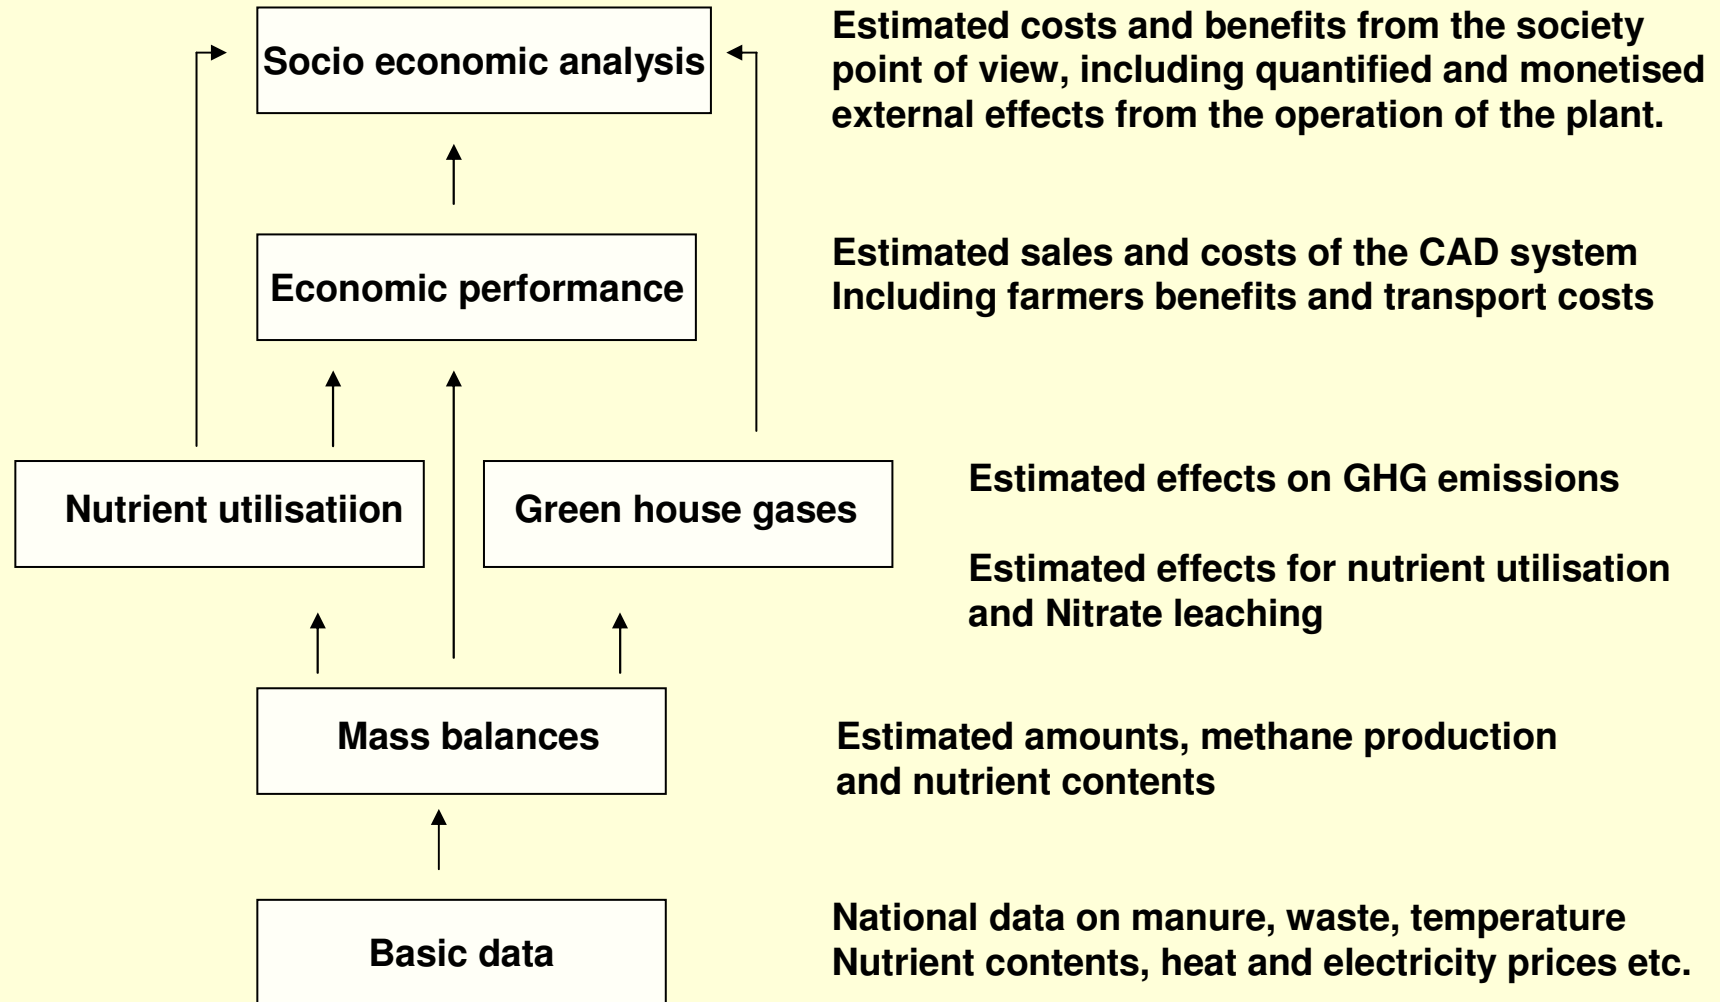

**-Reference situation = Business as usual**

**-Alternative = If a CAD plant was installed**

**Covering the area of the case studies**

# The stepwise structure of the analyses in the PROBIOGAS project

## Estimated treatment capacities and biogas production

	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
Treatment capacity 1000 tons/y	<b>220</b>	<b>75</b>	<b>44</b>	<b>53</b>	<b>168</b>	<b>34</b>
Treatment capacity Tons/d	<b>600</b>	<b>200</b>	<b>120</b>	<b>144</b>	<b>460</b>	<b>93</b>
Biogas production Mil m <sup>3</sup> CH <sub>4</sub>	<b>6,4</b>	<b>1,5</b>	<b>1,6</b>	<b>1,1</b>	<b>4,4</b>	<b>1</b>
Methane yield, m <sup>3</sup> CH <sub>4</sub> /ton	<b>29</b>	<b>20</b>	<b>37</b>	<b>21</b>	<b>26</b>	<b>30</b>

## **Estimated effects on fertiliser utilisation and value, as a result of the operation of the CAD plant**

**The table include potential benefits for both manure supplying farmers and crop producing farmers who receive surplus manure**

	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
<b>Saved ton N</b>	<b>413</b>	<b>73</b>	<b>61</b>	<b>30</b>	<b>198*)</b>	<b>44*)</b>
<b>Saved ton P<sub>2</sub>O<sub>5</sub></b>	<b>0</b>	<b>1,5</b>	<b>31</b>	<b>0</b>	<b>2*)</b>	<b>27*)</b>
<b>Saved ton K<sub>2</sub>O</b>	<b>0</b>	<b>65</b>	<b>35</b>	<b>0</b>	<b>2*)</b>	<b>27*)</b>
<b>Total savings fertiliser, 1000 €/year</b>	<b>308</b>	<b>82</b>	<b>79</b>	<b>21</b>	<b>160*)</b>	<b>76*)</b>
<b>Average savings per hectare, €/year</b>	<b>25</b>	<b>27</b>	<b>53</b>	<b>5</b>	<b>-</b>	<b>-</b>

**\*) potential but not actually utilised, as surplus is not redistributed**

## **Economic benefits for farmers (manure suppliers) in national 2005 prices**

<b>1000 €/year</b>	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
<b>Manure storage</b>	<b>0</b>	<b>-7</b>	<b>-7</b>	<b>-14</b>	<b>0</b>	<b>0</b>
<b>Manure spreading</b>	<b>16</b>	<b>-11</b>	<b>-1</b>	<b>-22</b>	<b>0</b>	<b>0</b>
<b>Fertiliser value *)</b>	<b>0</b>	<b>17</b>	<b>16</b>	<b>40</b>	<b>0</b>	<b>0</b>
<b>Long distance transportation</b>	<b>1054</b>	<b>22</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>
<b>Total cost savings</b>	<b>1070</b>	<b>21</b>	<b>8</b>	<b>4</b>	<b>0</b>	<b>0</b>

**\*) Achieved by farmers in the local area. Potential fertiliser values for crop producing farmers in other regions are not included in this table.**

## Investment costs, mil €, 2005 national prices

<b>Mil €</b>	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
<b>Capacity ton/day</b>	<b>600</b>	<b>200</b>	<b>120</b>	<b>144</b>	<b>460</b>	<b>93</b>
<b>Biogas plant</b>	<b>6,1</b>	<b>3,9</b>	<b>4,2</b>	<b>3,7</b>	<b>5,3</b>	<b>2,7</b>
<b>CHP facility</b>	<b>2,1</b>	<b>0,5</b>	<b>0,5</b>	<b>0,4</b>	<b>1,3</b>	<b>0,3</b>
<b>Total investment costs</b>	<b>8,2</b>	<b>4,4</b>	<b>4,7</b>	<b>4,1</b>	<b>6,6</b>	<b>3,0</b>

## Economic performance of the CAD system

1000 € per year

<b>1000 €</b>	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
<b>Capacity, tons/day</b>	<b>600</b>	<b>200</b>	<b>120</b>	<b>144</b>	<b>460</b>	<b>93</b>
<b>Transport</b>	<b>-1540</b>	<b>-209</b>	<b>-133</b>	<b>-111</b>	<b>-595</b>	<b>-45</b>
<b>Waste storage</b>	<b>0</b>	<b>-19</b>	<b>-7</b>	<b>-22</b>	<b>-1</b>	<b>-0,1</b>
<b>Separation</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>-40</b>	<b>0</b>	<b>0</b>
<b>Net result biogas plant</b>	<b>-24</b>	<b>88</b>	<b>486</b>	<b>-53</b>	<b>197</b>	<b>129</b>
<b>Profit</b>	<b>-1564</b>	<b>-140</b>	<b>346</b>	<b>-226</b>	<b>-399</b>	<b>84</b>

## Important preconditions

	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
<b>Electricity, €/KWh</b>	<b>0,06</b>	<b>0,11</b>	<b>0,14</b>	<b>0,07</b>	<b>0,07</b>	<b>0,07</b>
<b>Heat Price, €/MWh</b>	<b>0</b>	<b>30</b>	<b>25</b>	<b>20</b>	<b>0</b>	<b>0</b>
<b>Treatment fees. €/ton</b>	<b>0</b>	<b>4,8</b>	<b>30</b>	<b>13</b>	<b>27</b>	<b>120</b>

## **Conclusions**

**The assessments carried out in the PROBIOGAS project show there is a potential for CAD plants in all the analysed cases.**

**But apart from the French case, they all suffer from one or several disadvantageous preconditions. These preconditions may be seen as non technical barriers that are devastating the economic performance of the hypothetical plants in the case studies.**

**Consequently, these barriers must be removed before an enlargement with plants are likely to take place in the countries looked upon**

**Most important non technical barriers identified were:**

**1. Restrictions on waste supplies.**

**(Especially The Netherlands and Ireland, but also Belgium and Spain)**

**Most important non technical barriers identified were:**

**2. Poor electricity prices.**

**(The Netherlands, Ireland, Spain, Greece)**

**Most important non technical barriers identified were:**

**3. Insufficient marketing options for heat production**

**(The Netherlands, Spain, Greece)**

**Most important non technical barriers identified were:**

**4. Legal, administrative barriers and informations**

**(All, more or less)**

## Evaluation of preconditions:

- = poor, + = good, ++ = optimal

	<b>DK</b>	<b>NL</b>	<b>B</b>	<b>F</b>	<b>IRL</b>	<b>SP</b>	<b>GR</b>
Electricity price	<b>+</b>	<b>-</b>	<b>++</b>	<b>++</b>	<b>-</b>	<b>-</b>	<b>-</b>
Heat marketing options	<b>++</b>	<b>-</b>	<b>+</b>	<b>+</b>	<b>+</b>	<b>-</b>	<b>-</b>
Waste allowed, use of digestate	<b>++</b>	<b>-</b>	<b>+</b>	<b>++</b>	<b>-</b>	<b>+/-</b>	<b>++</b>
Administrative procedures, Authorities helpful	<b>++</b>	<b>-</b>	<b>+/-</b>	<b>+/-</b>	<b>-</b>	<b>-</b>	<b>-</b>

**The French case turns out to be the only one with almost optimal preconditions.**

**So given almost optimal preconditions, the French case shows that:**

- The CAD system is profitable even when transport costs are included**
- It is very close to socio-economic break even**
- Farmers benefit economically**
- Reduced Nitrate leakage of 15 ton N per year**
- GHG reduction of 186 kg CO<sub>2</sub> eqv. per ton input**
- Cost efficiency of GHG reduction of 26 € per ton CO<sub>2</sub> eqv.**

**Even though it is a relatively small plant**

## **So what should be done**

- 1. Remove restrictions on supplies of unproblematic wastes in especially The Netherlands, Ireland, but also Belgium and Spain**
- 2. Improve electricity prices for example by green electricity bonus in Ireland, The Netherlands, Spain and Greece**
- 3. Encourage industrial use of heat from biogas. Alternatively consider other than CHP from biogas, distribution via natural gas grid in The Netherlands and vehicle fuel in Spain and Greece**
- 4. Specific information about the potentials og the technology shold be given to authorities involved in biogas projects.**

**And:**

**Governmental support must be unambiguous.**

**Involvement and engagement of farmers is very important**

**A demonstration programme is recommended:**

**-investment grants for a number of plants**

**-monitoring programme for the build up of experience**

**Soon, available on the PROBIOGAS web site:**

<http://websrv4.sdu.dk/bio/Probiogas/sub/home.htm>

**-6 national reports and**

**-Final Assessment Report**
