

Announcement:
Reconciling the environment with livestock management
European workshop – Rennes, France – 19, 20 March 2013

IRSTEA (Ex-Cemagref) will be hosting a European Workshop on livestock management (from the housing to the manure spreading) in March 2013.

The aim of this workshop will be to gather scientific researchers and IPPC/IED inspectors in order to exchange ideas on the scientific knowledge on techniques, (Best Available Techniques and others), for the housing, storage, treatment and spreading steps and the technical real application on such techniques.

Topics to be discussed:

Scientific knowledge

Short review on the impact of livestock on the environment (air, water, soil). Which pollutants? Level of emissions? Key parameters influencing emissions?

Techniques available for reducing emissions (including BATs and non-BATs)

Which technique for which impact (air/soil/water)?
Ranking of the different environmental impacts?
Metrics to evaluate the efficiency of a given technique?
